

The INONI software platform

A powerful programmable GRC and resilience-building platform capable of meeting bespoke organisational needs

Purpose INONI Enterprise is a web software service delivered via the INONI platform on an unsupported, partly- or fully-supported basis (SaaS). It allows organisations to build comprehensive, practical and standards-aligned governance, risk and compliance associated capability, including business continuity. It can be hosted by us or you.

Enterprise delivers initial setup, and a working BCM system supporting each business unit, location and the organisation as a whole. The toolset is scalable and can be extended to accommodate potentially unlimited numbers of each. A user account is provided for each business unit and a manager account for each major location. Additional users can be added subject to capacity. Additional functions can be added and bespoke options are available.

Capability	Configuration	The Administrator interface provides unconstrained access to the full INONI online platform and associated capability. From here you can add, modify and manage tools to reflect your organisation’s chosen purpose and approach in any applicable discipline.
	Library	Enterprise provides access to INONI’s tool library including integrated risk, resilience and continuity surveys. These provide the option of fast-start reconfiguration.
	Data Collection	Captures information via unlimited customisable online questionnaires that can be completed by participants within or outside the business.
	Measurement	Measurement and improvement are key elements in global standards. Conceived as a benchmarking tool INONI retains full measurement and associated reporting capability. It provides an accessible, consistent and secure means of repeatably gathering volumes of distributed and diverse data. It offers expert system interpretation and guidance.
	Analysis	Collected information is pre-analysed, sorted and filtered extensively by INONI in real-time, as it is collected. This provides unique transparency and responsiveness.
	Reporting	Fully configurable reports, charts and dashboards provide comprehensive feedback including roll-up and drill-down of collected data.
	Management	INONI provides a range of management and support automation tools including workflow, files, FAQs, tags, benchmarks, audit logs and more.

Features	Determination	Access to all self-build aspects within a dedicated closed environment.
	Self-hosting	An Enterprise license is pre-requisite for self-hosting.
	Functionality	Superset of functionality available for INONI Pro™.
	Scaled Pricing	Incremental unit pricing is reduced for Enterprise licenses, outlay is increased.

Delegation Managers can be assigned to oversee groups, allowing distribution of responsibility and decentralisation. These can in turn be supervised by more senior management.

Administration Enterprise is nominally self-administered and requires a short period of intensive training. Typically, INONI specialists provide oversight support during the first year of use.

Hosting Hosting can be on our shared platform, on dedicated servers hosted by us, or hosted by you. Where this is the case we require periodic access to apply upgrades and monitor system usage.

Availability A standard Enterprise Account is typically available within 3 working days of agreement to supply. Baseline format will reflect the INONI Pro library.

Product Characteristics

Organisational Benefits

- Self-determination and the ability to support and develop the organisational requirement
 - Integrity and consistency across the organisation
 - Improved compliance with regulation, legal and customer requirements
 - Savings through efficiency and automation of repetitive and difficult tasks
-

Advantages over alternatives

- Configurable without programming
 - Independence over toolset design, ability to reflect your organisation's BCM methodology
 - Diverse application and bespoke tool build capability
 - Immediately available and globally accessible, 24x7
 - Optional self-hosting, all software upgrades included
 - Expert training and design consultancy permanently available
 - Negligible training requirement for managers and end-users
 - Library of proven tools available from day one
-
